

MTT FIESTA

OVERVIEW

It is a peaked modular frame structure designed with our newly developed aluminium extrusion.

The frame is covered with a PVC coated polyester, the roof being patterned into a tensile cone.

The cone is held up by 4 rafters attached to the corners of the frame with an adjustment in the center.

There is a variety of side wall options to choose from, e.g. Fabric, - Solid walls, glass panels, doors.

SELLING POINTS:

- The walling slides as curtains so there is no need to unhook or dismantle them.
- The roof structure and fabric is assembled on the ground for ease of erection then hoisted onto the split uprights.
- When fully erected it becomes a very sturdy structure.
- There is provision for joining the structures together with a water proof guttering system..
- The patterned roof minimises flapping, thereby lowering the noise factor.
- The new aluminium extrusion does away with the tedious job of having to tie the fabric to the frame, it just slides into the extrusion in the aluminium making a neater and quicker attachment.

STANDARD SIZES:

- 3m x 3m
- 4m x 4m
- 5m x 5m

USES: (small to medium sized venues)

Stalls, Small parties, Kiosks, Food and beverage tents, walkways entrances to larger structures.
