

MTT HIMALAYA

OVERVIEW

The Himalaya offers all the characteristics of a standard frame-type marquee in aluminium or steel with the added advantage of a computer-patterned tensile roof construction.

Optional Extras:

The ALU Himalaya is modular but can be extended with guttering, the STEEL is extendable lengthwise.
Solid walling, Glass Panelling, Doors, Air conditioning, Lighting, Flooring

SELLING POINTS:

- The peaked computer-patterned tensile roof of the Himalaya ensures there is a constant tension throughout the roof section in all directions - unlike that of a regular 'A'-Framed marquee, it virtually eliminates movement in a windy environment.
- The Himalaya leg height is adjustable to suite most terrain conditions.
- The standard side-walls slide open and shut, making the creation of entrances and exits achievable with ease.
- Standard fabric walling comes in plain or cottage pane options.
- Walling is tensioned down by bungie cord on the walling to a ground rail to prevent flapping.

STANDARD SIZES:

Standard Sizes - The Himalaya is available in the following modules.

| Aluminum frame | Steel frame |
|----------------|-------------------------------------|
| • 4m X4m | 5m x 5m extendable in 5m sections |
| • 5m x 5m | 10m x 5m extendable in 5m sections |
| • 5m x 6m | 12m x 10m extendable in 5m sections |
| • 10m x 10m | 15m x 10m extendable in 5m sections |

USES:

The Himalaya is designed to be used in most applications requiring a clear span and free-standing solution.
