

MTT STRETCH

OVERVIEW

MTT Structures is proud to announce the inclusion of MTT Stretch Tents as an addition to our wide range of product offerings. MTT Stretch Tents offer a uniquely different perspective to your standard event type tents to create a freeform structure that will transform your event from ordinary to extraordinary. MTT Stretch Tents have been specifically designed to cater for ease of use, adaptability, stability and aesthetic appeal, to give you our valued client, a superior product.

SELLING POINTS:

Unlike our opposition stretch tents our stretch tents have a rope extrusion around the edges of the tents allowing us to join our tents together with the aid of our double sided aluminium extrusion thereby making a completely waterproof join.

With this method one can join any widths together and also take off from specially designed configuration units such as triangular, octagonal, and dectagonal shaped, that one can take off three, four or five splits respectively. Our fabric is of the latest water proofed pvc stretch fabric made to last longer than the old 3 ply. It comes into its own when one requires the structure to go around obstructions, corners or places where conventional structures cannot be installed.

STANDARD SIZES:

Manufactured to customers requirements.

USES:

Parties, restaurants, temporary roofing, in fact to cover all shapes and sizes.
